

# Standard Expansion Joint Frame Designs

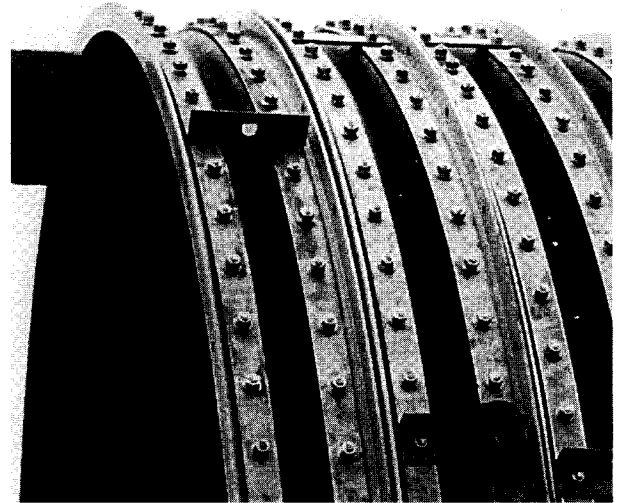

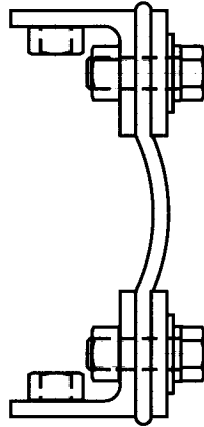

These designs can be built circular or rectangular. Stainless steel, carbon steel, and alloy steel are all options for expansion joints and they can be built with single, double or no liners. All bolt hole tolerances are within  $\frac{1}{16}$ " to allow for ease of installation.

## Angle Frame

### Features

Angle frame expansion joints are available with leg and toe oriented either outward or inward.

Pictured is a leg out/toe in style frame. The drawing is leg in/toe in.

## C Frame

### Features

Completely formed frame with all hardware welded in.

Allows for ease of installation in existing ductwork.
